Automated insights

Reel is the best-performing format at 5.38% average engagement. Engagement is **up 5.6%** from the first to last third of the selected period. The strongest posting window is **Monday, 12-14**. The model detects a **weekend lift of 1.2%** and a 15.2% spread across calendar months. If current patterns continue, the 90-day outlook ends near **4.07% ER** and **10.7K followers**. This scenario ends near **4.35% ER** and **10.8K followers**.

Data-backed recommendations

- Prioritize **Reel** and test adjacent variants; it currently leads the selected mix by 33.9%.
- Concentrate high-value posts around **Monday 12-14**, while keeping a control group at other times to validate causality.
- Use a gradual 20% posting-frequency increase; the modeled uplift is 6.9% in end-period ER.
